

GATEWAY TO PRODUCTS & SERVICES FOR MICROSYSTEMS RESEARCH

Your Technology Gateway: <https://www1.cmc.ca>

Are you interested in the products and services that CMC Microsystems provides to enable research in a variety of microsystems technology areas? CMC's Technology Gateway is the central resource that helps our clients (primarily researchers at Canadian universities) to use those products and services effectively.

What: This web-based interface includes the following features:

- **Web pages**—Descriptions of products and services provided by CMC for microsystems design, prototyping and test
- **Products & Services Catalog**—Individual product datasheets through which authorized clients can download or otherwise access documents, technology files and other materials
- **Access to services**—For prototype fabrication (including design rule check) and test (including the test equipment pool and Testing Collaboratory)
- **Discussion forums**—An online venue for CMC's clients and support engineers to share experiences and knowledge
- **Knowledge base items**—Product enhancements and solutions to common challenges encountered by users (these will be linked from the discussion forums)

Who: The Technology Gateway is primarily intended for CMC's *clients*—microsystems researchers at Canadian universities who are using the products and services provided by CMC. Legal agreements determine the access individual clients may have to particular items in the Gateway.

Visitors to CMC's website who are not (or not yet) authorized clients may register to browse the web pages in the Technology Gateway and participate in some discussion forums. These visitors are known as *subscribers* and may not download any products or access services restricted to clients.

How: Both clients and subscribers must register with CMC through a form available on the Gateway home page at <https://www1.cmc.ca/> (see image on right).

Why—Benefits to Researchers: The Gateway provides simple and effective access to information about CMC-provided products and services, as well as opportunities to share experiences and ideas with other researchers.
