

Secure, High-performance Cadence EDA

CMC Microsystems is a Cadence Cloud Passport partner serving academics. Access leading-edge technology on the cloud through CMC's Cloud service.

Features

- Access to Cadence® University Software Program tools for design, layout, and analysis of ASIC and PCB designs*
- Delivery via CMC Cloud, a protected environment that transforms your laptop into a secure, high-performance design lab**
- Fully configured, installed, and hosted by CMC with continuous software updates to reduce administration costs and accelerate startup
- Design and development resources available on demand with minimal configuration
- Access training courses, webinars, and documentation through CMC

Annual fee

\$2000 USD

per professor, for classes up to 50 students

“We have been using CMC’s cloud service in my research lab for nearly two years. My students very much like the high reliability of the service. As a faculty member I can count on CMC’s support staff to look after all software updates and the general day-to-day maintenance of the tools. The service has reduced our local setup and servicing time to zero.”

- Prof. Carlos Saavedra, Electrical and Computer Engineering, Queen’s University

* Cadence tools are not included. They must be purchased from Cadence by the professor.

** Server resources are not included. They are to be purchased separately by the professor.
