

What Use is Hardware Without Software?

Deborah Guillon, MASC
Machine Learning Lead, YetiWare Inc.

Communities in Isolation

How Did We Get Here: The Free Lunch

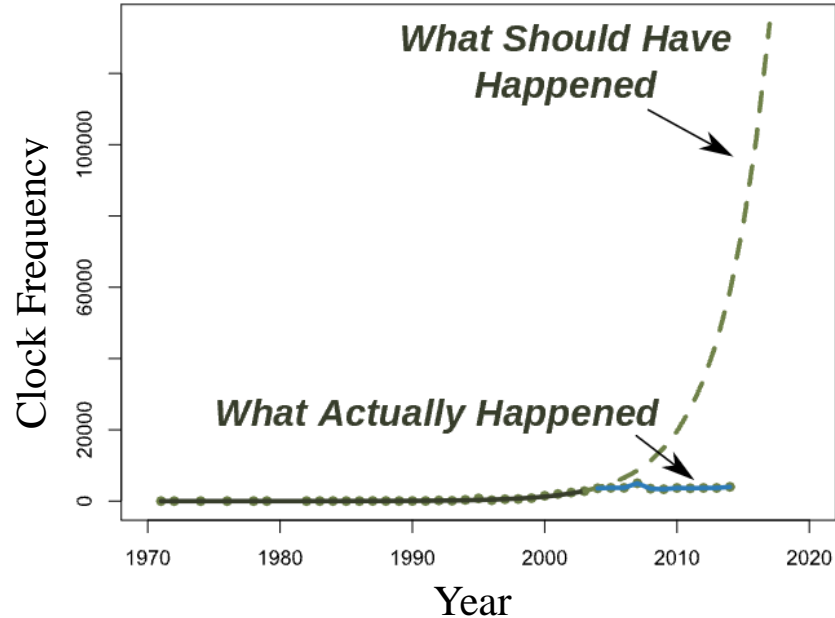

Software

Golden era

- Applications
- New markets
- Grow customers

Processor Clock Frequency Over Time

Hardware

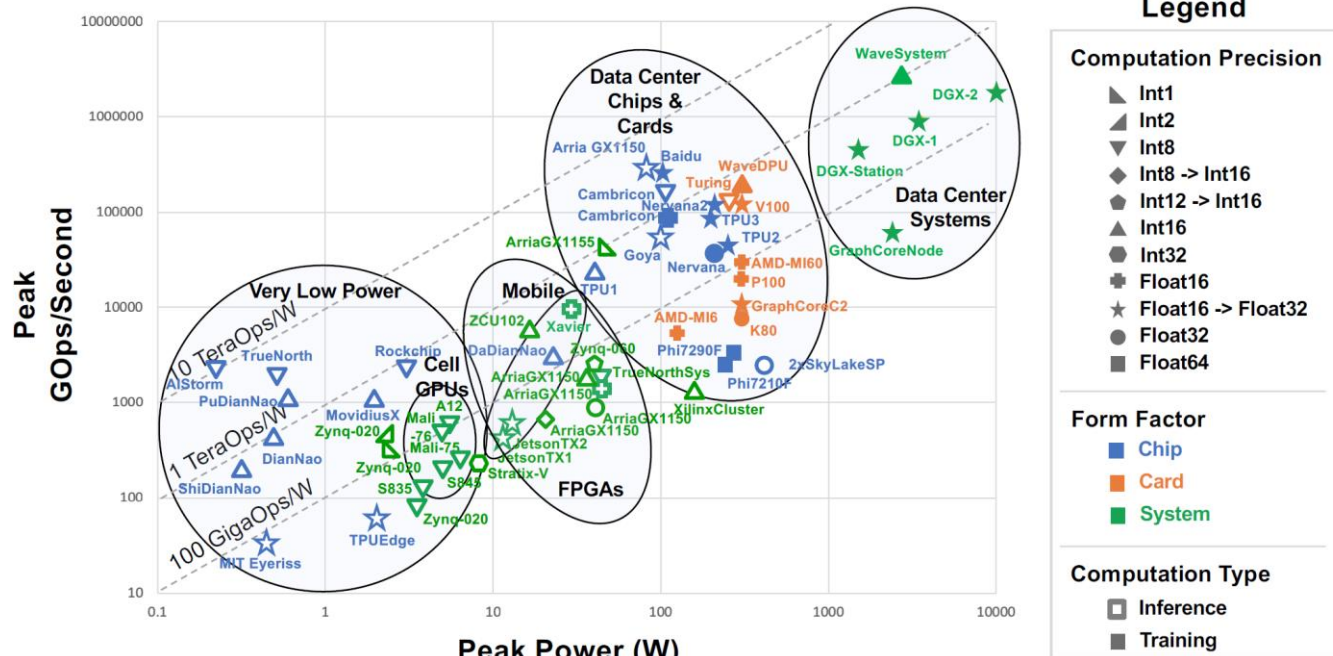

Processor performance increase

End of general-purpose compute

What Happened When the Free Lunch Ended?

Hardware: More or application-specific processors

From: Reuther, Michaleas, Jones, et al. Survey and Benchmarking of Machine Learning Accelerators. 2019 Sept. [Link](#)

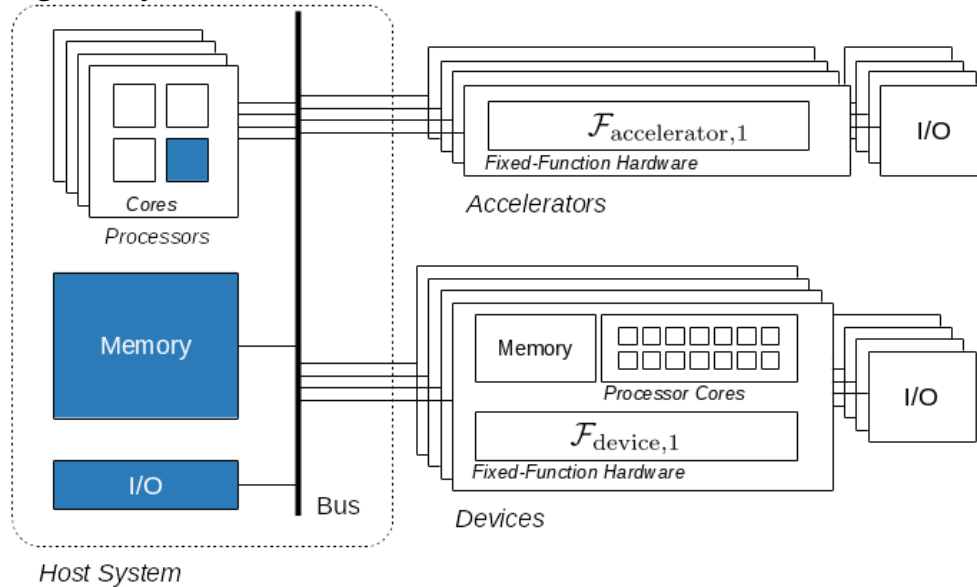

Software Didn't Change

Software is broken

Stuck in a 1950s model

No parallelism, no heterogeneity

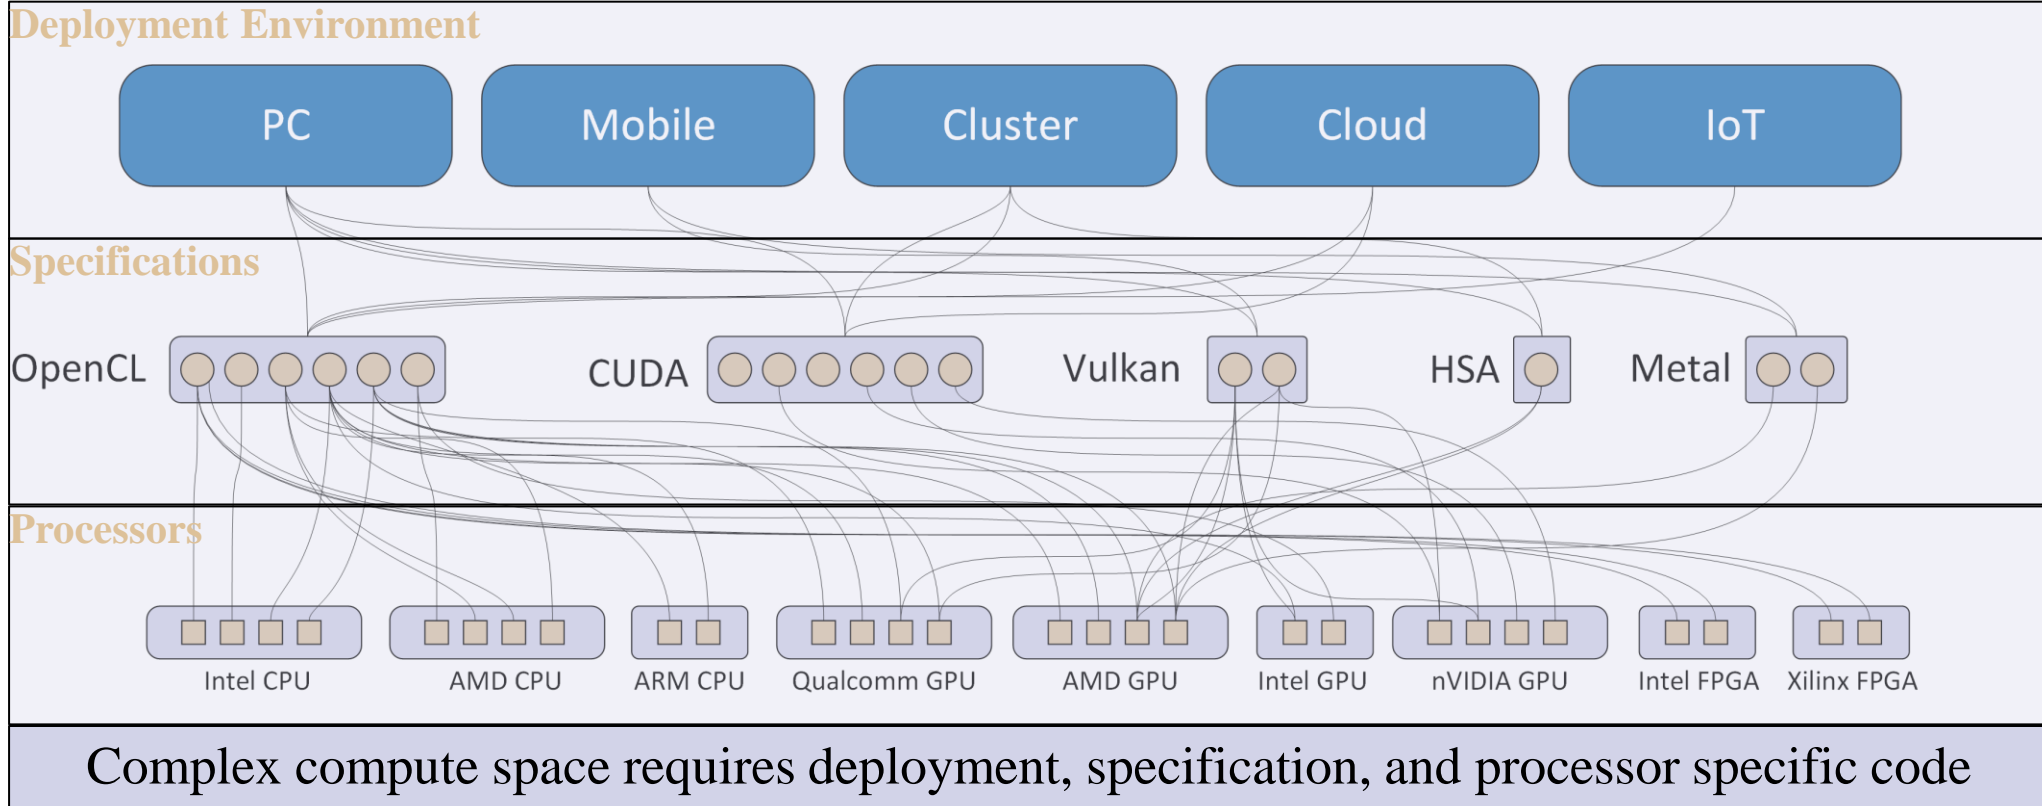

No one is using your hardware efficiently

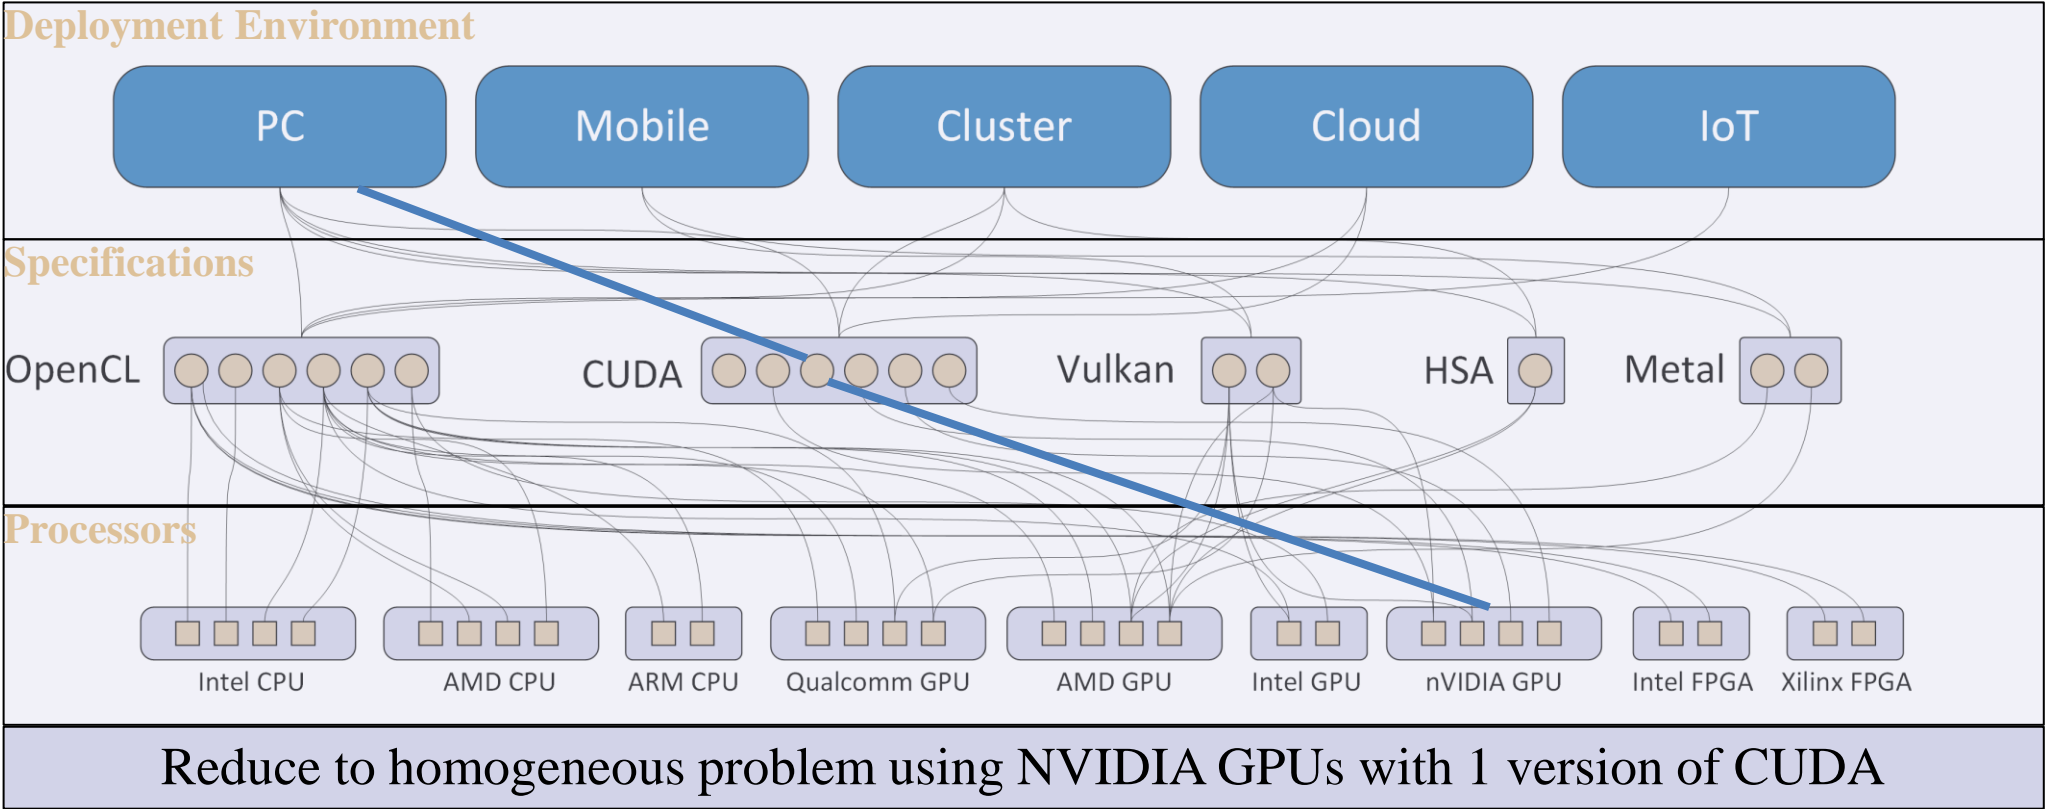

Use ML?

We need to think differently to solve this problem

Heterogeneous Compute Space

Compute Space Chosen

Frameworks Layered On Top

ML Frameworks

TensorFlow

PyTorch

Deployment Environment

PC

Mobile

Cluster

Cloud

IoT

Specifications

OpenCL

CUDA

Vulkan

HSA

Metal

Processors

Intel CPU

AMD CPU

ARM CPU

Qualcomm GPU

AMD GPU

Intel GPU

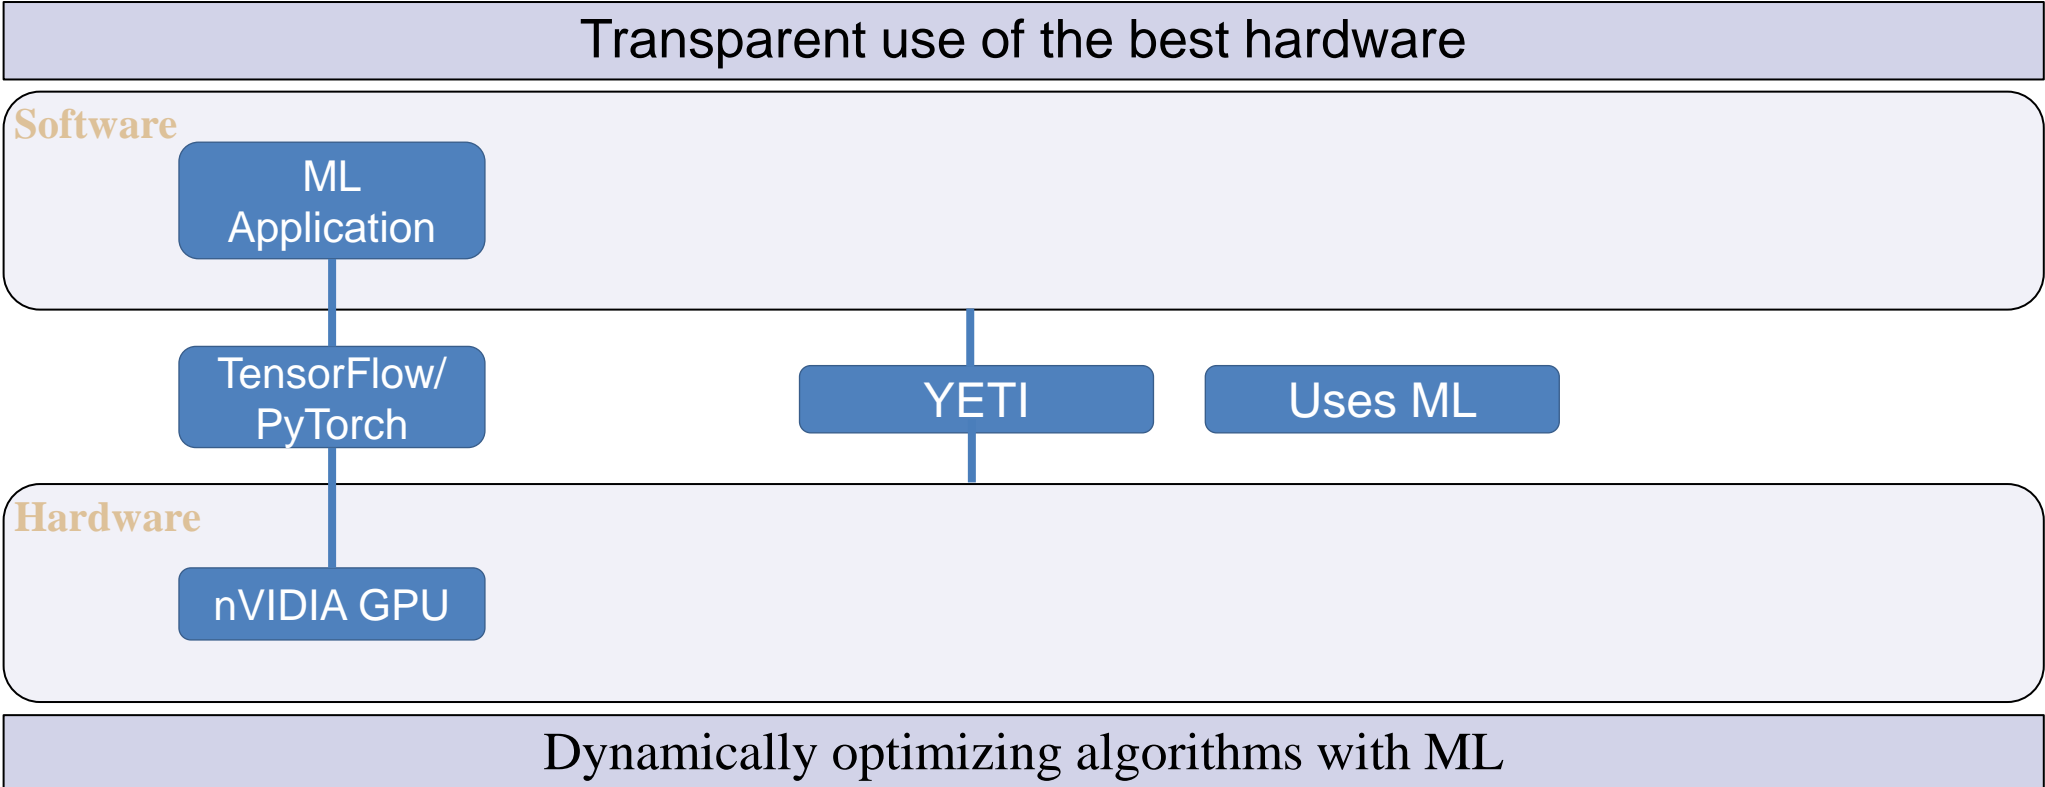

nVIDIA GPU

Intel FPGA

Xilinx FPGA

Shift problem to HW, which must integrate with ML frameworks

Our Vision

YetiWare and CMC Prototyped First Component

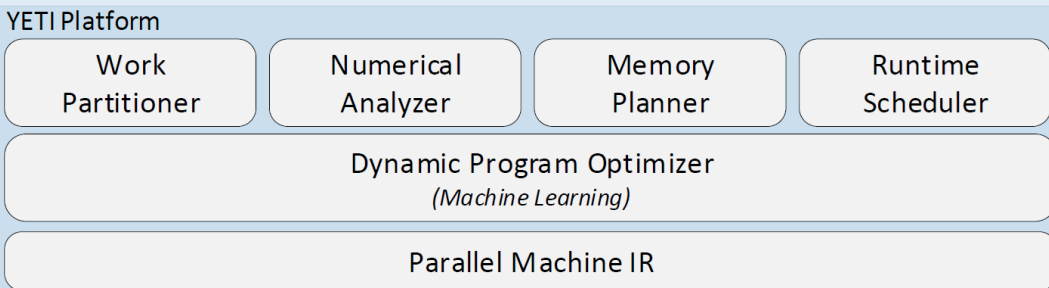

<https://account.cmc.ca/WhatWeOffer/Products/CMC-00200-05319.aspx>

Our Vision: The YETI Platform

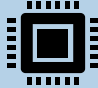

Productivity Layer 
Write code only once.

Performance Layer 
Continuous performance improvement through updated runtimes.

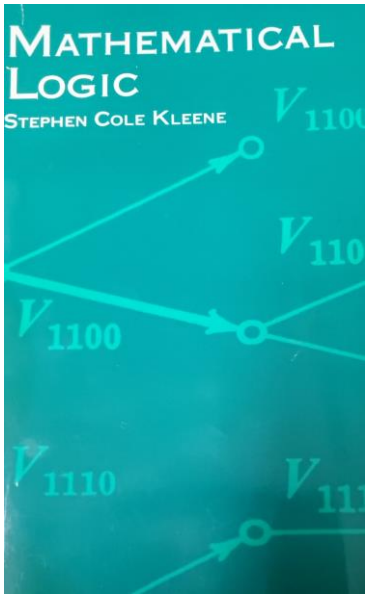

Portability Layer 
Any processor. Any vendor. Any deployment environment.

Heterogeneous Processor Targets

Communities in Isolation

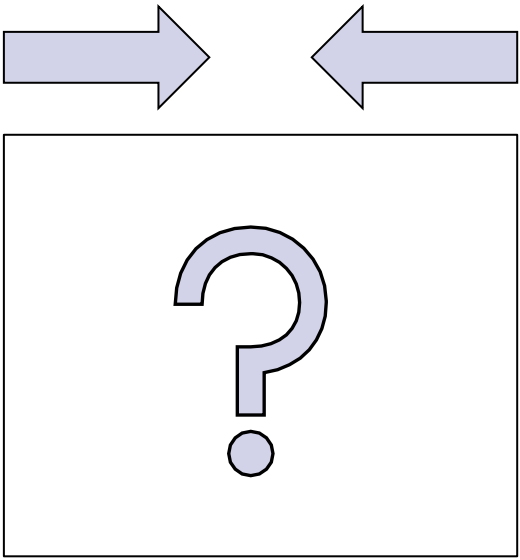

Software without hardware is math

Hardware without software is a heater

This Photo is licensed under [CC BY-SA](#)

Need to bring together to accelerate **heterogeneous** computing ... missing piece

Communities Reconnected

YETI will connect SW and HW in a heterogeneous environment

 Productivity

 Performance

 Portability
