

CMC convenes meeting of international microelectronic and nanotechnology hardware broker organizations at DAC

June 20, 2018

CMC Microsystems is pleased to convene its annual meeting of international microelectronic and nanotechnology broker organizations at [DAC 2018](#), the premier conference for design automation for electronic systems. The meeting takes place Monday, June 25 in San Francisco.

CMC has provided strategic leadership and convened meetings of this group for more than a decade, says Gord Harling, President & CEO of CMC Microsystems. "There is a long history of cooperation and mutually beneficial activities that have enabled us to address challenges in hardware innovation that would be otherwise be too complex or costly for any one of us to pursue alone."

"We look forward to meeting with our peer organizations from around the globe to exchange information, to share best practices, and to discuss joint service options or collaborative initiatives," says Mr. Harling.

About CMC Microsystems and Canada's National Design Network:

CMC Microsystems works with researchers and industry across Canada's National Design Network, providing access to world-class tools, technologies, expertise and industrial capabilities for designing, prototyping and manufacturing innovations in microsystems and nanotechnologies. CMC reduces barriers to technology adoption by creating and sharing platform technologies.
